“After completing my bachelor’s degree in biology and neuroscience, I began working as a perioperative technician in the same-day surgery center at The Ohio State University Wexner Medical Center. Among other duties, one responsibility was to deliver surgical specimens to pathology. I observed many interesting specimens being delivered to the lab window. One day, the door was open, and I saw a pathologist assistant dissecting an entire limb. I stopped to watch and asked what the qualifications were to do that. Shortly after, I applied and was offered the opportunity to work as an anatomic pathology technologist.”
